PROFESSIONAL TREATMENTS

Authorized Circadia Partners offer various professional treatments that work synergistically with a Circadia home care regimen.

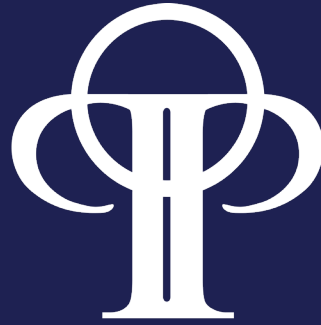

The Enzymes - Enzymes function as a gentle yet effective alternative to chemical peels. Circadia enzyme treatments safely bring immediate radiance and clarity to the skin by digesting dead cells and surface debris. Enzyme treatments may be performed on all skin types, either alone or part of a Circadia treatment program.

Chemical Peels - Circadia chemical peels are formulated in various strengths and combinations to reduce fine lines and wrinkles, improve the appearance of mild scars, treat acne and pigmentation.

Oxygen Treatment - Oxygen is essential for all life. It is important to differentiate between the activities of oxygen entering the body through respiration versus the benefit of a topical application. Although the use of oxygen has been used in various types of treatments, Dr. Peter T. Pugliese developed the first professional procedure to effectively generate oxygen on the skin with this signature delivery system. Circadia's Oxygen is the key professional treatment for improving a variety of skin conditions.

SWiCH - This peel alternative works to help the body generate its own cellular energy, safely replenishing healthy components of the skin without inflicting damage. This revolutionary treatment has no downtime and leaves the skin looking luminous and firmer with an even, balanced skin tone. This Treatment continues to repair the skin for 28 consecutive days.
